

1025 E	KITF 3970	Monorail impact & transmitted force test kit (EN 397, 812, 443, 12492). Includes sliding rod on ball bearings, junction plate, pivot with interchangeable impactors (flat, hemispherical, etc.), and load cell holder.
--------	-----------	--

Kit components:

- Holder with two ball bushings, made of Ergal 75, complete with junction plate.
- Designed for installation on the drop carriage used for free-fall tests on MAU 1006 and similar models (requires the two-part drop carriage version).
- Sliding rod equipped with flat, hemispherical, or alternative shape impactors (various geometries available), with a total weight of 3 kg or 5 kg (custom weights available).
- Pivot-shaped holder for supporting headforms in a vertical position, featuring a 2.75" spherical pivot and a safety locking ring.
- Three-piece load cell holder.
- Elongation brake with a driven sliding rod, designed for mounting on aluminum Item profiles.

Recommended accessories / options:

- Kistler 9041 load cell with cable and 5073 charge amplifier, or alternative PCB load cell.
- Set of EN 960/06 magnesium ¾ headforms (sizes D, G, K, N and A, C, E, J, M, O; custom sizes available).
